

Fiserv APAC Hospitality Integration With Oracle Payment Interface – Pay@Reception

Fiserv offers the hospitality industry a validated integration with Oracle Payment Interface that eliminates the need for extensive integration effort with Oracle Hospitality OPERA property management system (PMS). The solution delivers an elevated experience for guests and also enables hotels to manage payments centrally, simplifying the operations and reconciliation process for front line and back-office staff.

Integration Overview

Fiserv hospitality solution for integration with Oracle Payment Interface is a middleware-based, private-cloud hosted omnichannel solution.

From the hotel's premises, the configuration targets Fiserv data center in the APAC region – either securely over the internet or through dedicated routers.

The smart terminals placed at the hotel's premises securely receive the requests from Oracle Hospitality OPERA PMS and deliver the transaction requests to Fiserv acquiring authorization hosts in the Fiserv data centers. The token-based transactions are delivered from the Oracle Payment Interface or Token Proxy Service (TPS) servers directly to Fiserv middleware to process the requests bypassing the terminals.

The validated integration provides a modern, seamless, highly scalable, and reliable solution with support for single and multi-property configurations of the PMS while minimizing the deployments and changes for the property.

Integration Details

Oracle Payment Interface communicates to Fiserv through middleware mode. The integration supports the following functionality:

- Pre-authorization
- Incremental authorization (top-up) and authorization release
- Purchase
- Sale completion
- Void and refund transactions
- End of day settlement
- Get token transaction
- Get token (bulk)
- Get PAN (bulk)
- Transaction reversal
